

LoamCart

Investor Pitch Deck

01. The thesis

Small farms need profitable routes to specialty buyers, but wholesale coordination is still built around phone calls and fragmented demand.

02. The problem

Growers overproduce for uncertain orders while restaurants and grocers struggle to source consistent regional supply, pack sizes, and delivery windows.

03. The solution

LoamCart is a wholesale planning network that matches farm availability to committed buyer demand before harvest and coordinates shared delivery routes.

04. Product

- Seasonal crop and availability profiles
- Buyer purchasing commitments
- Consolidated order and invoice workflows
- Route planning for shared cold-chain delivery

05. Why now

Restaurants are seeking resilient local supply, while farms have better connectivity and more pressure to make every acre economically productive.

06. Customer

Specialty produce farms, independent grocers, restaurant groups, and regional food hubs.

07. Business model

Transaction fee on completed orders, with optional monthly planning software for larger farms and food hubs.

08. Go-to-market

Build density in one agricultural region through food hubs, then add buyer groups that need reliable weekly supply.

09. Defensibility

Local supply-demand history, route density, and crop-specific fulfillment data improve matching and reduce delivery cost as each region grows.

10. The ask

Raise \$2.8M to launch in two regions, support cold-chain partnerships, and prove repeat ordering across the first 150 buyers. ****Assumption required:**** regional order density must be validated.
