

SignalNest

Investor Pitch Deck

01. The thesis

Parents and schools need earlier visibility into student wellbeing without turning every concern into a crisis workflow.

02. The problem

Student support teams rely on periodic surveys and referrals. Signals arrive late, context is scattered, and staff lack capacity to follow up consistently.

03. The solution

SignalNest combines short check-ins, trusted adult workflows, and privacy-first trend detection so schools can offer timely, proportionate support.

04. Product

- Student pulse check-ins with accessible prompts
- Counselor and trusted-adult case queues
- Cohort trend views without exposing unnecessary detail
- Family communication templates

05. Why now

Schools are under pressure to improve student support while protecting sensitive information and making scarce counselor time go further.

06. Customer

Secondary schools and school groups with dedicated pastoral care or counseling teams.

07. Business model

Annual per-student license with implementation support and optional professional development packages.

08. Go-to-market

Partner with school wellbeing leads and counselor associations. Begin with one year group, then expand school-wide after staff adoption is proven.

09. Defensibility

Trust-centered workflows, careful permissions, and longitudinal support patterns create value without selling student data or using opaque risk scores.

10. The ask

Raise \$2.4M to complete safeguarding audits, run 10 school pilots, and build district-level reporting.

****Assumption required:**** pilot adoption and renewal rates need validation.
